

# Meet the family...

## Introducing our software suite

We are an entrepreneurial consultancy providing high quality actuarial and analytics expertise, underpinned by a deep understanding of technology solutions and the use of our bespoke high quality software.

We build our software so that our clients can have access to value adding analytics, can operate in a more robust environment and need to use fewer resources.

## Dynam.IT

- The Dynam.IT environment consists of a base framework with a structured process for data importing and validation, information manipulation and calculation, and interrogation and reporting.
- Customised libraries loaded into the framework provide a robust and user friendly environment for intensive calculations.
- The environment provides a clear audit trail of calculation, user level security, and is built on the latest technology platforms with the ability to integrate into enterprise systems and data warehouses.

### Reserving

- Our reserving application covers the full reserving process from data import and investigation, through the technical actuarial aspects of setting the ultimates based on actuarial techniques and graphical output, to management information and analytics to help the business understand the results.

For our reserving brochure, [click here](#)

### Technical Provisions

- Extremely fast and easy calculation of the technical provisions, including automatic analyses of change from previous submissions, stress and sensitivity analyses, and rich reporting. It integrates tightly with our reserving application to automate and streamline the calculation.

### Standard Formula

- Easy calculation of the standard formula with the same robust rich reporting and analytics within our other applications. Again, it integrates tightly with the Technical Provisions application, ensuring that most of the calculation is automatic.

## Pricing

- Outside of the DynamIT framework, our web-based technical pricing platform enables robust calculation of technical rates, including formal data capture and standardised storage of all quotes.

Sneak peek

Over the coming months we will be launching two exciting new applications to integrate into the Dynam.IT suite and bring further benefits to our clients. Keep an eye on our website for the announcement.

### Analyser

- Mining and analysing your data to understand the hidden relationships and dependencies. Will be ideal for pricing or data exploration.

### Psicle

- An engine to allow the business to better use and understand the outputs from its risk models, and to more easily optimise its business.

Visit the software suite part of our website [here](#), or read about our “pay-per-run” service [here](#).

Dynamo Analytics is a UK and South African based consultancy that helps businesses understand the various complexities they face in their operating environments using statistical and financial tools to model uncertain future outcomes.

We help businesses understand the hidden complexities within their operating environments by using cutting edge actuarial and simulation tools to model financial or operational data and processes.

Armed with these powerful analytic tools, businesses maximise the probability of achieving their goals and aims.

We combine deep actuarial skills, strong experience in predictive modelling, and application development expertise to help organisations make sense of the information available to them and exploit it.
