

## VACANCY: IFRS 17 CONSULTANT/SENIOR CONSULTANT

### LIFE AT DYNAMO

Dynamo Analytics is an actuarial consultancy and software provider, established in 2012, which has now grown to an international presence with a team of more than 45 employees, across the UK, France, South Africa, Norway and Australia.

There are two key components to the business; the consulting team advises our clients on actuarial, financial and statistical modelling, and our software team continues to build out our innovative enterprise modelling platform, Psicle. The teams work closely together to deliver modern and effective solutions for our clients.

*“The entrepreneurial Dynamo spirit attracts the kind of people who thrive on innovation”*

Being a close-knit team allows everyone to have a truly meaningful role, with the opportunity to add true value to both our clients and our growing business. Our team tell us that the talent, quality and creativity of our people, doing something worthwhile is what makes Dynamo a rewarding and enjoyable place to work.

Our values are simple: Expertise, Entrepreneurialism, Selflessness, Heroism and “#ClientLove”. This simple blend adds up to create a driven, motivated and engaged team.

### THE CONSULTANT/SENIOR CONSULTANT

We are looking for reserving experts with a grounding in IFRS 17 to join us in driving actuarial transformation and IFRS 17 implementations. A big area of focus for our software, this is an exciting opportunity for an established, capable and driven consultant to carve a career in this space.

This is an opportunity to work on some of the most interesting and ambitious transformations in the General Insurance market with an emphasis on delivering highly technical but practical models, with Psicle at the forefront of transforming how these models run.

### ESSENTIAL SKILLS & EXPERIENCE

- Qualified (ideally within the UK) Actuary with strong experience in IFRS 17. An understanding of other reserving bases would be beneficial, for example IFRS 4 or Solvency II.
- You also have the ability to use your core skills and knowledge to solve problems outside of your experience, with the ability to seek out solutions.
- You are comfortable interacting with clients and communicating the results of your analysis to clients.
- You are a strong self-starter, and demonstrate curiosity and inquisitiveness in your work.
- You care deeply about helping the team succeed and about delivering a high-quality work product to the client.

- You have a strong appreciation for the role that technology can play in businesses, either through formal studies in computer science/data analytics, or through hobbies such as coding.
- A consulting background would be an advantage, demonstrating the ability to assess and understand clients' needs, carrying out the necessary research and data collection using appropriate techniques and actuarial principles.

## REQUIRED

- A Fellow of the Institute and Faculty of Actuaries or equivalent.
- A mathematical, engineering, statistical or similar degree, minimum 2:1.
- Must have the right to work in UK.
- A desire to shape and achieve transformational change, with proven consulting skills to influence and facilitate others through that change.

## TEAM FIT

We don't have a typical 'Dynamite' type and having an identikit team is not what we aspire to. However, there are a few things we do have in common.

- We value having deep expertise and broad knowledge of an area, and rely on our collective expertise to add value to our clients.
- #ClientLove instantly resonates with every one of us in the team, and we each strive to deliver the best possible experience for each client.
- We all want to be a part of something disruptive and new, and want to add our knowledge and skills to shape the way.
- Working with others is our preferred style of getting things done; we're a tightly knit team and help each other constantly.
- We're self-starters through and through.
- We value drive and tenacity for the things our people are passionate about.
