

**OPPORTUNITY:** Actuarial Graduate / Actuarial Analyst

**LOCATION:** Melbourne, Australia

### LIFE AT DYNAMO

Dynamo Analytics is an actuarial consultancy and software provider, established in London in 2012. We are now a team of more than 50 employees across the UK, France, South Africa, Norway and Australia.

There are two key components to the business; our consulting team advises our clients on actuarial, financial and statistical modelling, and our software team continues to develop our innovative enterprise modelling platform, Psicle. This allows us to provide our clients a unique and complementary offering of a software solution and actuarial advice, and our teams work closely together across geographies to deliver these.

Being a close-knit team allows everyone to have a truly meaningful role, with the opportunity to add real value to both our clients and our growing business. Our team tell us that our people, their talent and expertise, collaboration and the work itself is what makes Dynamo a rewarding and enjoyable place to be.

### THE OPPORTUNITY

We have an opportunity for bright and talented candidates with an interest in the use of technology to improve actuarial practice. We will consider entry-level graduates as well as candidates who bring up to 2 years' experience from industry or consultancy.

Working primarily on the consulting side of Dynamo, you will join a close-knit and growing team, assessing and delivering to client requirements across reserving, reporting, capital modelling and pricing.

You will support the team as we deliver professional advice based on rigorous, data-driven analysis, as well as building technical models for in-production insurance processes. In addition, you will contribute to developing the company's technology proposition by collaborating with our actuarial software development and data analytics engineering teams.

All will be completed with the support of our local and international team of analysts, together with mentorship from our senior consulting team, who are always willing to share their deep and varied expertise. As you work across a range of projects, you will build on the foundational knowledge gained in your studies through application, transitioning that knowledge into core applied competency and building capability to progress your actuarial career.

You can enjoy career growth opportunities that extend beyond borders, supporting delivery for our clients, becoming a key part of their unique and transformational journeys, and helping us to grow the business.

## REQUIRED SKILLS, EXPERIENCE AND ATTRIBUTES:

- An actuarial, mathematical, engineering, statistical or similar degree with excellent grades.
- The intention to progress towards Fellowship with the Actuaries Institute (or equivalent), for which you will have access to our study support program.
- The ability to learn quickly, and to use your core skills and knowledge to solve problems outside of your experience.
- A strong appreciation for the role that technology can play in businesses, either through formal studies in areas such as data analytics or computer science, or through interests such as coding.
- A strong self-starter and able to demonstrate curiosity and inquisitiveness in your work.
- Good written and verbal communication skills, for interacting with and delivering high-quality work to clients, as well as for communicating the results of your analysis to more senior members in the team.
- A collaborative nature, with a strong desire to contribute to team success.
- General insurance experience and/or working knowledge of SQL, R or SAS would be advantageous, but not essential.
- Full right to work and remain in Australia.

## TEAM FIT

Our values are simple: Expertise, Entrepreneurialism, Selflessness, Heroism and “#ClientLove”. These basic attributes add up to create a driven, motivated and engaged team.

We don't have a typical 'Dynamite' type and having an identikit team is not what we aspire to. However, there are a few things we do have in common.

- We value having deep expertise and broad knowledge of an area and rely on our collective expertise to add value to our clients.
- #ClientLove instantly resonates with every one of us in the team, and we each strive to deliver the best possible experience for each client.
- We all want to be a part of something disruptive and new and want to add our knowledge and skills to shape the way.
- Working with others is our preferred style of getting things done; we're a tightly knit team and help each other constantly, we recognise the uniqueness of all, which combined, together, is what enables exceptional delivery.
- We're self-starters through and through.
- #EmployeeLove, our people are deeply humble humans, that together achieve outstanding success.
- We value drive and tenacity, for the things our people are passionate about – we call this the Dynamo “Spark”.

## HOW TO APPLY

If you feel that you could be a good fit for our team, please send your CV and a cover note to [careers@dyna-mo.com](mailto:careers@dyna-mo.com).

Recruitment is a two-way process, so we'd love to know what you are looking for and why this could be the place for you.
